

Nyotron PARANOID

PREVENTIVE ENDPOINT DETECTION AND RESPONSE (EDR)

With 96% of all malware being crafted for a single organization or even a user, a single line of protection in the form of an antivirus/anti-malware product is not sufficient. You need a second or last line of defence to protect you from evasive threats. This is Nyotron PARANOID.

Nyotron's PARANOID prevents damage from malware that bypasses existing security controls and offers granular visibility into the attack timeline. Our OS-Centric Positive Security automatically whitelists trusted OS behavior and rejects everything else. When combined with an existing anti-malware solution, organizations get the defense in depth they need to bring the time to containment to zero.

THREAT-AGNOSTIC PROTECTION

Uncompromised protection against ransomware, fileless malware, and other evasive threats.

DEEP VISIBILITY

See detailed information about the root cause behind the attack and attacker's methods (TTPs) without sifting through voluminous data.

USE CASES

Protection from malware that antivirus misses

Granular visibility into the attack

Stronger security for Windows 10

Better application control/whitelisting

Lightweight server protection

KEY ADVANTAGES

Works with all existing antivirus/anti-malware solutions, including Windows Defender, requiring no rip & replace

Doesn't require resource-draining disk scanning

Doesn't require bandwidth-consuming AV definition updates

Supports air-gapped environments

Threat-agnostic defense without predictive technologies like ML/AI

SUPPORTED PLATFORMS

Windows 7
Windows 10
Windows Server 2008 R2
Windows Server 2012 R2
Windows Server 2016
Windows Server 2019
